

Starting Current Limiter

Art. Nr.: 0810 00

Function

Starting current limiter for reducing lamp starting currents (problem loads such as energy-saving lamps) to an extent tolerable for mechanical switching contacts (e. g. relays).

Note: Energy-saving lamps are not suitable for rapid switching changes (ON/OFF) as, for example, is the case for detectors and self-acting switches. The life of energy-saving lamps can thus be considerably reduced.

Warning

Caution: The installation and assembly of electrical equipment may only be performed by a skilled electrician.

Not suitable for dimmers or electronic switches (e. g. self-acting switches, triac inserts or TRONIC inserts).

The maximum connected load (200 W) must not be exceeded.

Non-observance of the installation instructions may cause fire or other hazards.

Installation

Connect the starting current limiter in series with the lamps.

Connect as shown in the schematic diagram.

If the maximum connected load is exceeded or a defect (e. g. short-circuit) is present, the integrated microfuse will blow, and the starting current limiter will have to be replaced.

Schematic Diagram

Specifications

Connected load:	200 W lamp load max.
Max. operating temperature:	65 °C
Dimensions:	approx. 45x25x12 mm (e. g. for a 60 mm flush-mounted box)

Acceptance of guarantee

We accept the guarantee in accordance with the corresponding legal provisions.

Please return the unit postage paid to our central service department giving a brief description of the fault:
